

WorldWeather Inc.  
Predicting The Impact of Nature

---

**Canadian Prairies Weather Service** is designed for Canada's Prairie Provinces. The product provides a detailed seven day outlook for the prairie; including temperatures, precipitation and wind information along with an assessment of how the weather will be impacting on-farm activity during the forecast period. The intention of this product is to provide an assessment of weather and crop conditions as they pertain to the producer's need for routine and seasonal field working activities. The product will provide an expert assessment of when weather conditions will be best for spraying, planting, harvesting and/or fertilizer application. Specific time periods of when rain will begin and end and a more detailed assessment of the areas most likely to see the greatest rainfall are singled out each day in an attempt to provide a higher level of weather coverage designed for daily and weekly on farm business decision making.

In addition to the daily (Monday through Friday) forecast product World Weather, Inc. provides a periodic assessment of crop and field conditions in a newsletter format entitled "**The Canadian Agriculture Weather Prognosticator**". This periodic newsletter contains a summary of recent past weather events that have had an impact on the Prairies agriculture . A forecast for the next 30- and 60-day periods will often be presented in "**The Canadian Agriculture Weather Prognosticator**" along with special situation news articles pertaining to significant weather events outside of Canada that either have had or soon will have influence on world commodity trade prices.

These two weather products are designed to work together to provide producers, traders, merchandisers, analysts and news reporters the most complete assessment of weather conditions across the Prairies. The product should prove to be all inclusive of the details necessary to be successful in agricultural business and trade decisions. Samples of these two products are attached herein.

The Fees for “[Canadian Prairies Weather Service](#)” are USD \$35/month or USD \$245/year. An option for our Canadian Prairies producers is available in which access to our live weather website is available for USD \$15/month. The live weather website contains detailed weather information for all other agricultural production areas in the world. Information about soil moisture, rainfall and the two week outlook is available for places like Australia, China, South America, the United States, Europe and more. The monthly service fee for access to the website and a subscription to Canadian Prairies Weather is USD \$50/month or USD \$300/year.

If you do not wish to pay by credit card you can also pay by check, electronic deposit or wire transfer. If you request an invoice or wish to make either an electronic despite or wire transfer please either call 913-383-1161 or send an email to [www.worldweather.cc](http://www.worldweather.cc).
